Marvin Nyakina

Location: Perth Amboy, New Jersey, US
Portfolio | LinkedIn | GitHub
Email: marvinnyaoga@gmail.com | Mobile: (732) 887 5717

Software Engineer | Full Stack Developer

Education

Rutgers University — Newark, New Jersey, United States
Bachelor of Science in Computer Science & Minor in Data Science — *Sep 2024 – May 2027*

Technical Skills

Languages	:	Java, Python, C/C++, JavaScript, PHP, HTML, CSS, SQL
Frameworks	:	Node.js, Express, React.js
Data	:	pandas, BeautifulSoup, Matplotlib, Seaborn, Plotly, Jupyter
Databases	:	MySQL, PostgreSQL, MongoDB
Dev Tools	:	Git, GitHub, GitLab, Docker, Visual Studio Code

Experience

Quality Assurance Associate — March 2024 – Present
The Home Depot — *Perth Amboy, New Jersey, USA*

- Leverage WMS to verify accuracy across inbound and outbound shipments, reducing stock variance by 15% through systematic auditing and exception handling
- Coordinate daily logistics activities on warehouse docks and storage areas, using IDAT to track product movement and ensure efficient transitions between receiving and stocking
- Monitor real-time inventory data through WMS and Pulse dashboards, proactively identifying and resolving discrepancies to maintain operational accuracy

Data Science Intern — January 2023 – March 2023
Kenya Power — *Nairobi, Kenya*

- Designed and implemented an end-to-end pipeline to monitor power supply shortages by web scraping real-time social media data with **Python (BeautifulSoup)**, preprocessing and structuring text with **pandas**, and storing it in CSV and SQL formats for analysis
- Conducted EDA and created 30+ interactive visualizations with **Matplotlib, Seaborn, and Plotly** in Jupyter notebooks, uncovering 20+ key geographic trends in power outage patterns
- Established a continuous monitoring system, retraining models weekly to maintain 80% accuracy and supporting early-warning alerts that improved response time by 30%

Projects

Blood Bank Management System — *PHP, MySQL, JavaScript, Docker* — Source Code

- Built a full-stack blood bank platform with **role-based portals** for admins, donors, and hospitals, covering donor registration, blood stock tracking, and hospital blood requests
- Implemented secure authentication with **bcrypt password hashing**, session-based access control, and **prepared statements** to prevent SQL injection
- Designed a relational **MySQL schema** (Admin, Donor, Hospital, BloodStock, Donation) and an admin dashboard with live stats and blood-stock charts
- Containerized with **Docker** for local development and deployed to production with environment-based configuration keeping credentials out of version control

Portfolio — *Node.js, Express, JavaScript, Git* — Source Code

- Built a **CRUD application** backed by a **RESTful API** in Node.js and Express, supporting POST, GET, PATCH, and DELETE operations
- Deployed to production on **Render**, serving as a live showcase of projects and experience

Certifications

- Introduction to Software Development (Coursera)
- Programming with Java (Coursera)
